### **Chris Fowler International**

We have just purchased a Horizon HOF-20 High-Speed Off-line Sheet Feeder. When we initially looked at this machine we thought it was a great idea and could possibly help us in the process of finishing colour digital flat work.

In practice we have found that the HOF can not only help in the process of finishing pre-collated flat printed sheets, it can also easily cope with our workload and more. In other words we struggle to keep up with the speed of the feeder. It's versatility enables you to run hundreds of pre-collated documents and finish them into booklets with the added bonus of a hand feed section for the very small run requirement. The set up screen is very user friendly as always with GAE.

Overall Chris Fowler International are very pleased with the performance and the extra capacity that has been freed up as a consequence on our larger format finishing lines.
